GraphOn Awarded Two U.S. Patents Relating to Multi-Homed Firewalls and Virtual Private Networks (VPNs)

SANTA CRUZ, CA, USA – July 25, 2007 – GraphOn Corporation (OTCBB: GOJO.OB), a leading worldwide developer of server-based application publishing and Web-enabling software solutions, announced today that it has been issued two new patents by the U.S. Patent and Trademark Office.

U.S. Patent 7,249,376 describes multi-homed firewalls that include the ability to dynamically update Domain Name Service (DNS) mappings. Dynamically updating DNS mappings provides for enhanced transparency for users of a network, allowing them to navigate a complex network without having to know about the existence of the firewalls that protect the network.

U.S. Patent 7,249,378 applies to a dedicated DNS server associated with firewalls that are used to form a VPN. The patented technology allows for the creation of virtual private networks wherein two remote machines communicate securely, regardless of the degree of proximity or separation, in the same manner as though the machines were on the same local area network.

“These new patents represent further additions to our intellectual property portfolio,” said Robert Dilworth, GraphOn’s chief executive officer. “The total number of patents now owned by GraphOn is seventeen, a number that we expect to continue to increase in the future. Continued strengthening and broadening of our portfolio of patents that protect fundamental technology relating to the Internet, firewalls and other areas represent strategically important activities for GraphOn. Our objective is to maximize the value of GraphOn’s patent portfolio, to contribute technology to our current GO-Global product line, and to provide opportunities for development of new products.”

About GraphOn Corporation

For over a decade, GraphOn has been an innovator of cost-effective, advanced solutions that help customers access applications from anywhere. GraphOn’s high-performance software provides fast remote access, cross-platform connectivity, and a centralized architecture that delivers a dramatically lower cost of ownership. The company’s solutions run under Microsoft (MSFT) Windows, Linux, and UNIX, including Sun (SUNW) Solaris, IBM AIX, Hewlett-Packard (HPQ) HP-UX, and more. For more information, call 1.800.GRAPHON or visit www.graphon.com.

This press release contains statements that are forward looking as that term is defined by the United States Private Securities Litigation Reform Act of 1995. These statements are based on current expectations that are subject to risks and uncertainties. Actual results may differ, due to factors such as shifts in customer demand, product shipment schedules, product mix, competitive products and pricing, technological shifts and other variables. Readers are referred to GraphOn’s most recent periodic and other reports filed with the Securities and Exchange Commission.
